Additional main shaft rotation during color change	2

When loading a DST file to the embroidery machine, use the 'Optimize with user-defined values' option for optimization.

You need to edit the set values at installation according to the next page. Those settings will be saved and used as user-defined optimization values.

Coloreel / ZSK recommended – ZSK DST file Settings

These settings are to be edited only once.

Optimize with user-defined values when loading a new DST file.

Tap L4 Optimize with user-defined values
